Setting up IR Toys on Grid Pad by Smartbox

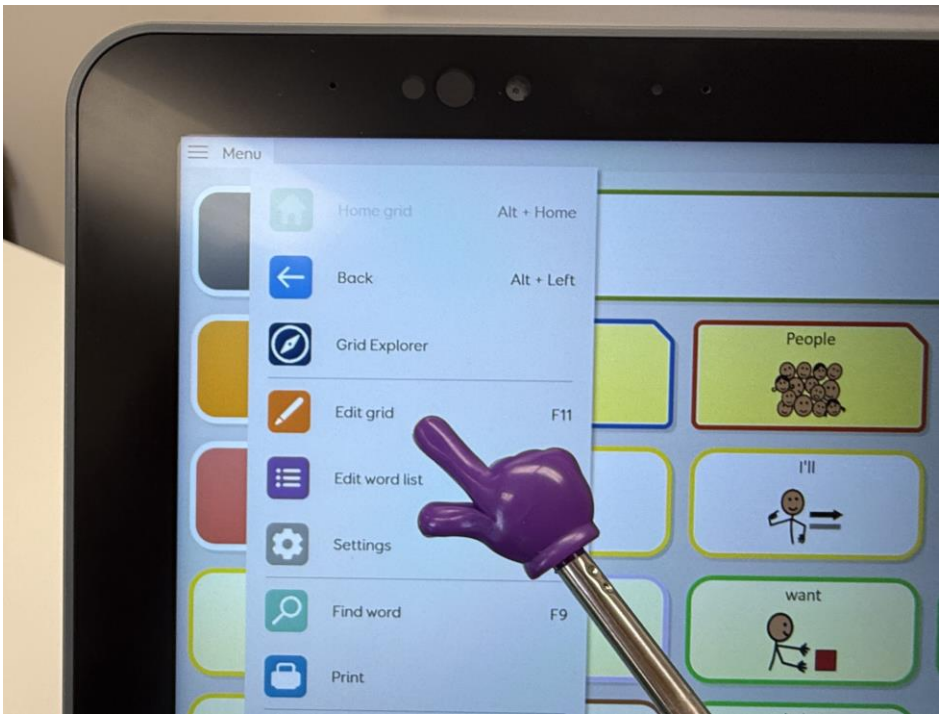

1. Open **Grid** on your device and grab the toy you would like to pair.

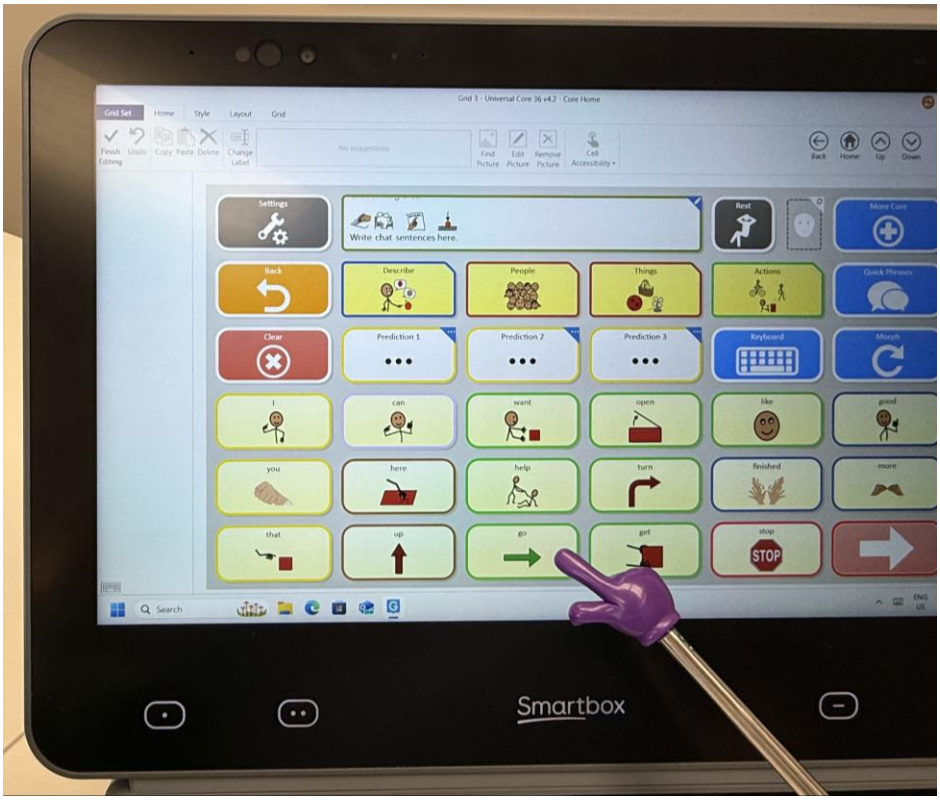

2. Click **Menu** in the upper left corner of the screen.

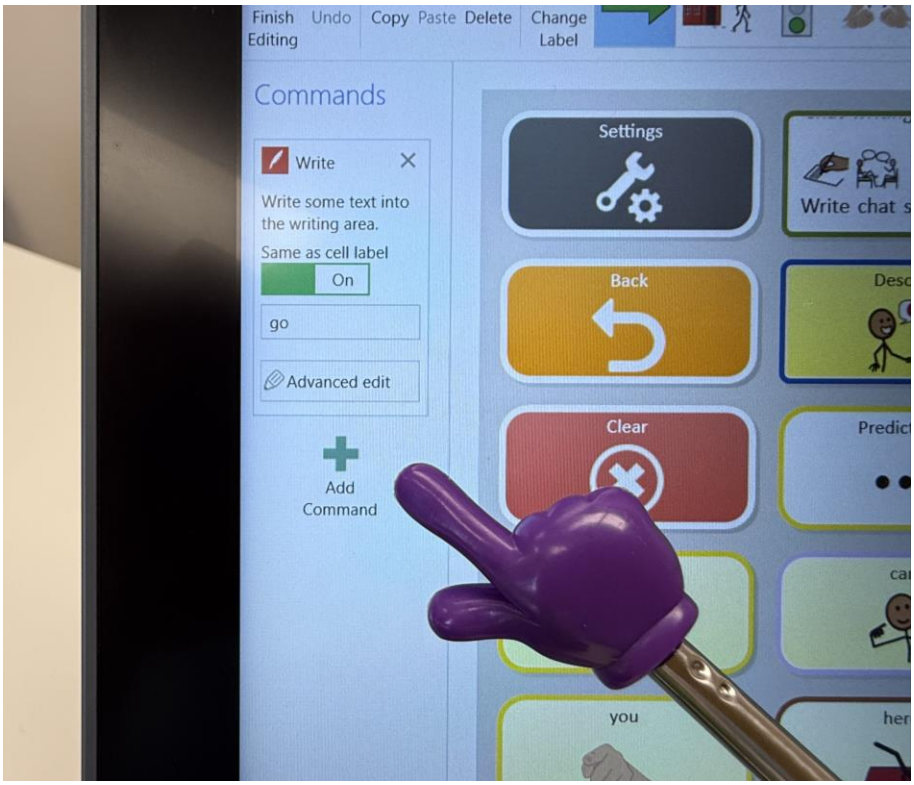

3. Select **Edit Grid**.

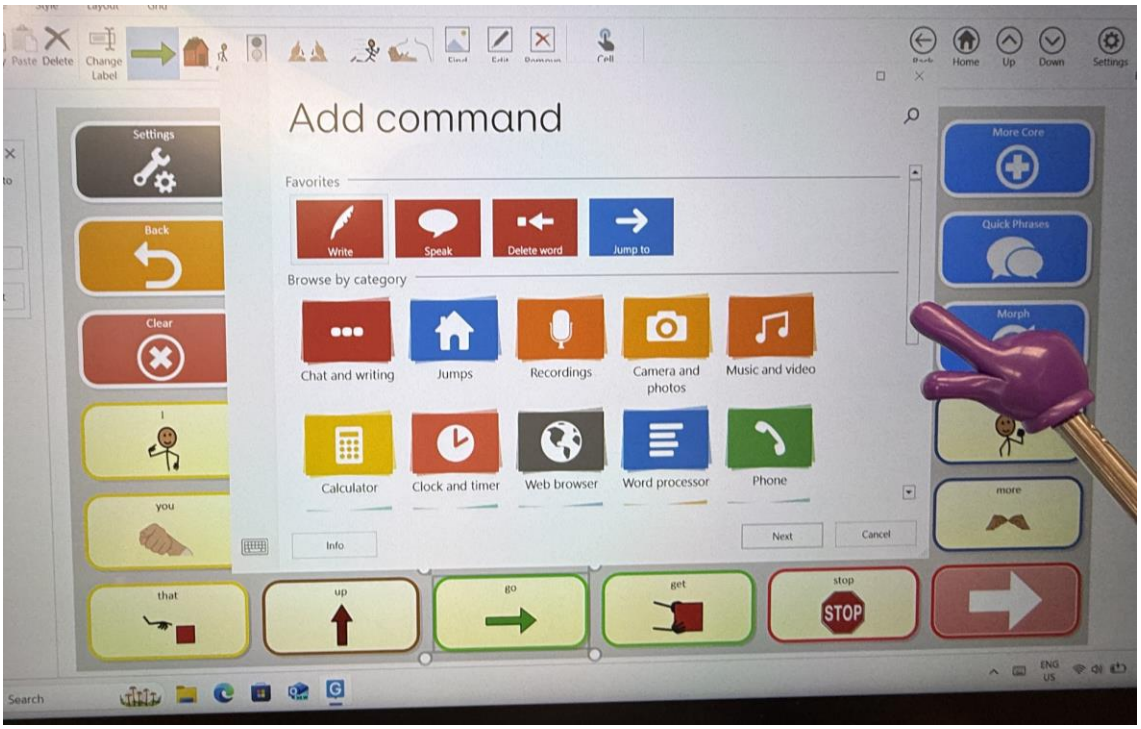

4. Click the button you would like to add the toy's action to.

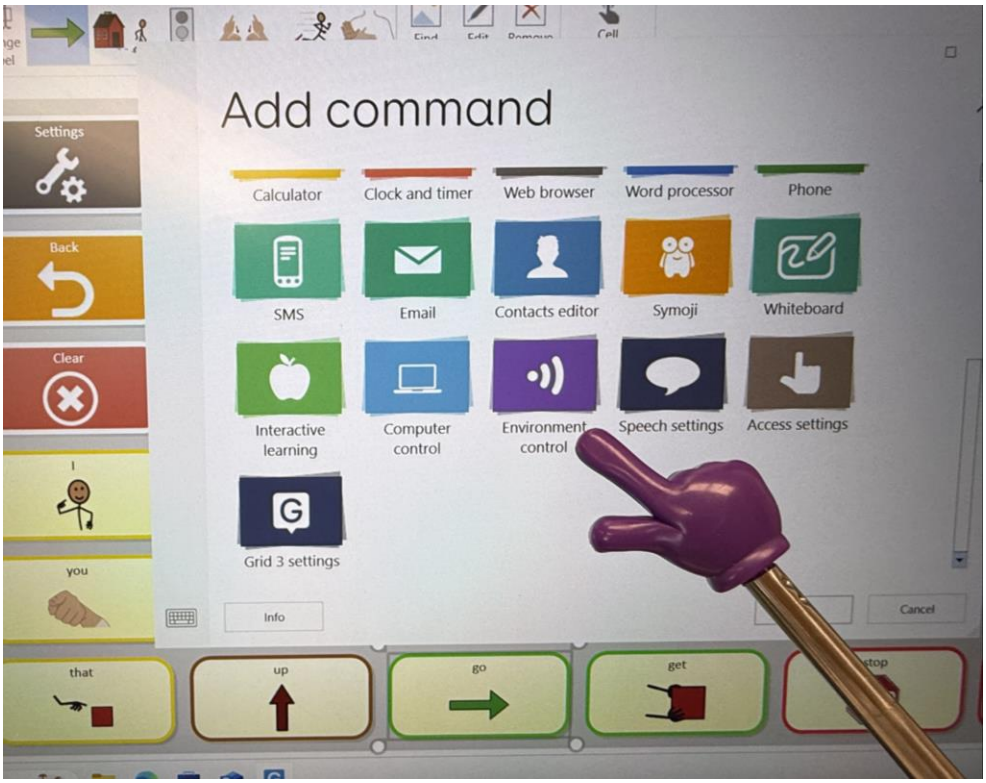

5. Under the **Commands** column on the left, select **Add Command**.

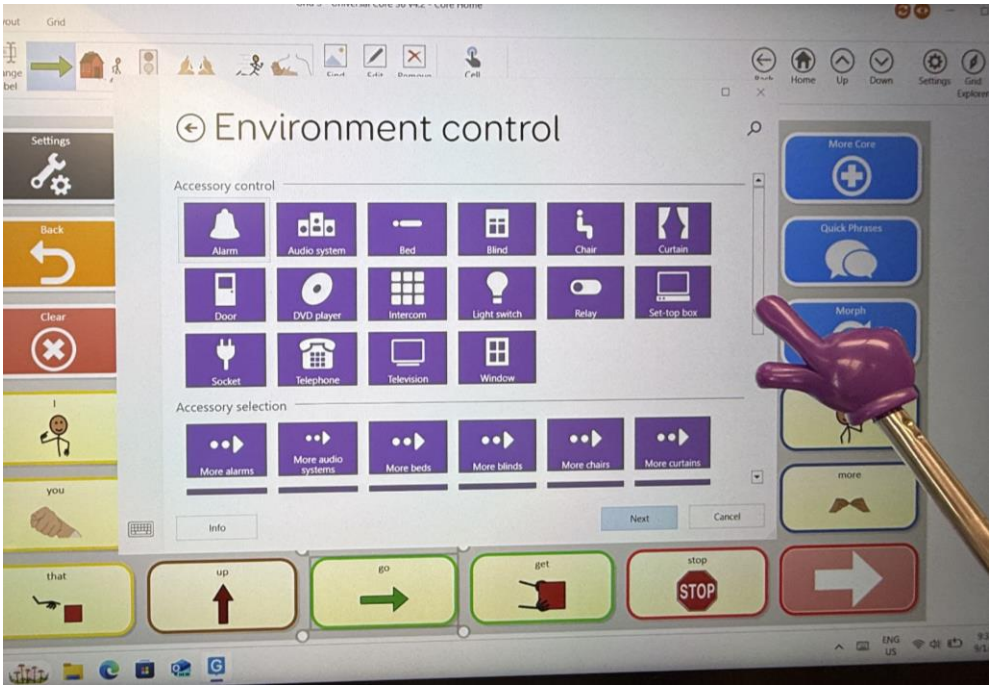

6. In the **Add Command** menu, scroll all the way down.

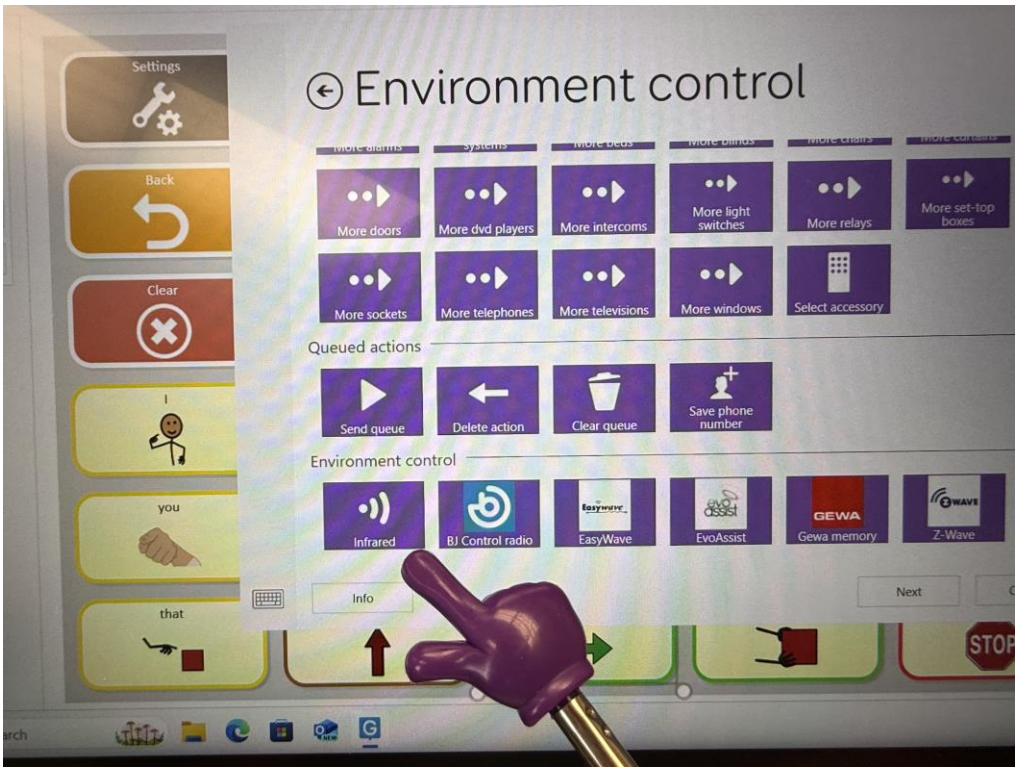

7. Select **Environmental Control**.

8. In the **Environmental Control** menu, scroll all the way down.

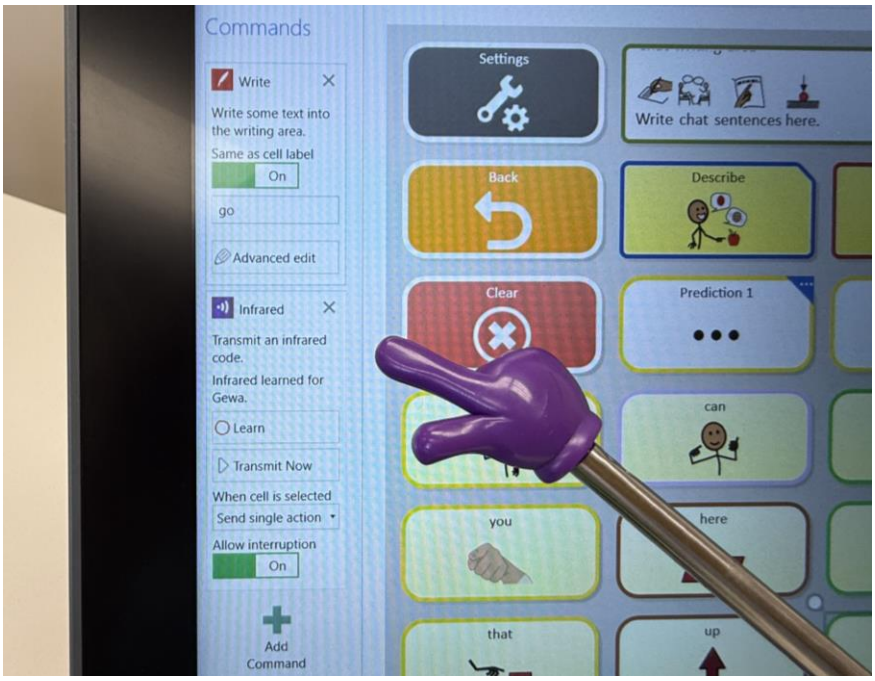

9. Select **Infrared.**

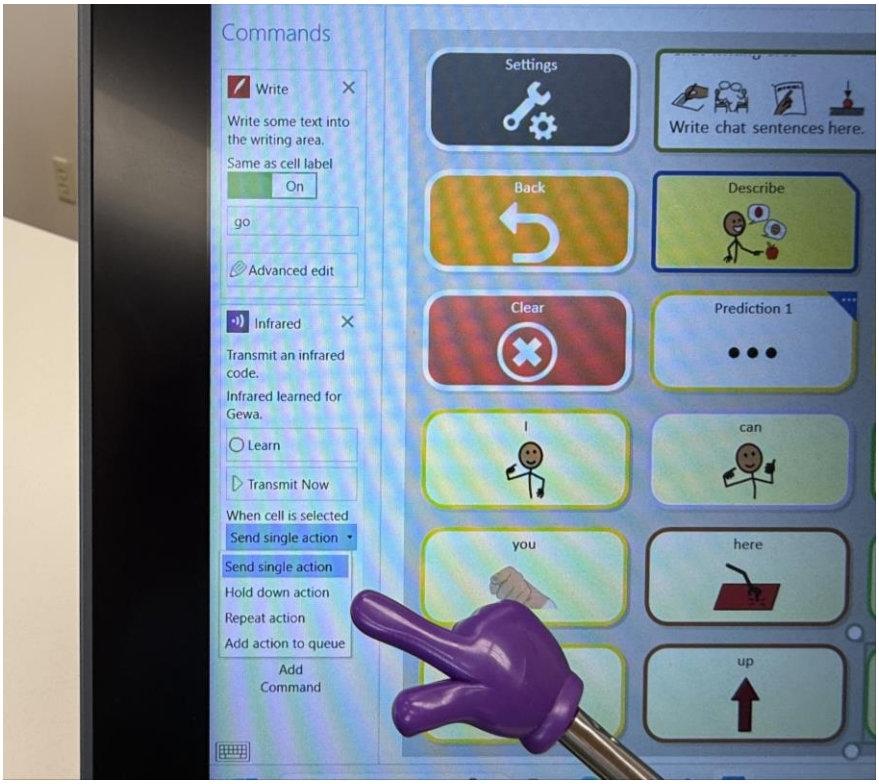

10. When the **Learn Infrared** menu appears, follow the directions on the screen. Hold the toy's remote ~2 inches from the infrared sensor on the device (upper-right corner on this device) and press the button to perform the desired action. This will record the infrared signal so the device will be able to replicate it.

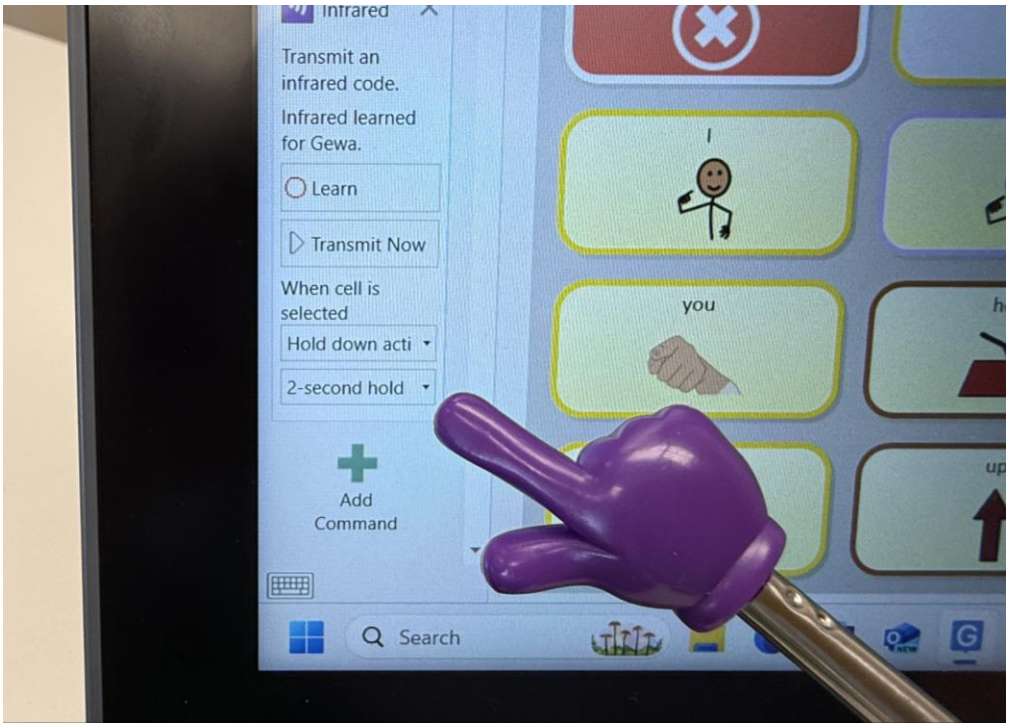

11. When successful, you will see the infrared command appear in the **Commands** column. You have the option to re-learn the signal, transmit the signal, and select the action.

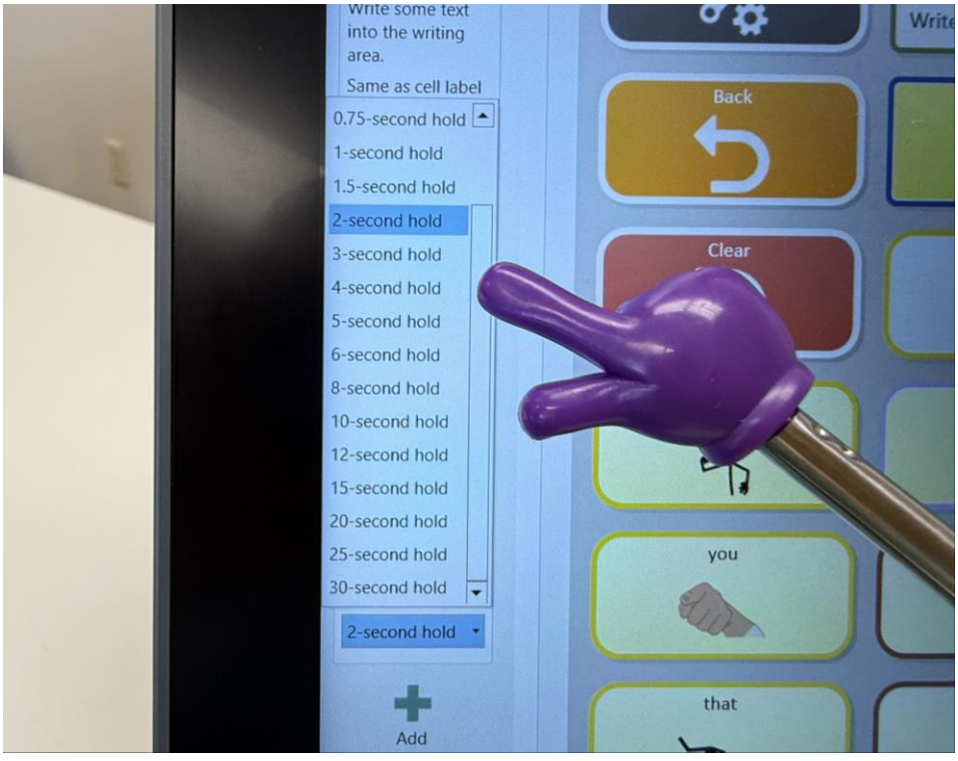

12. For many toy actions, you may want to select "**Hold down action".**

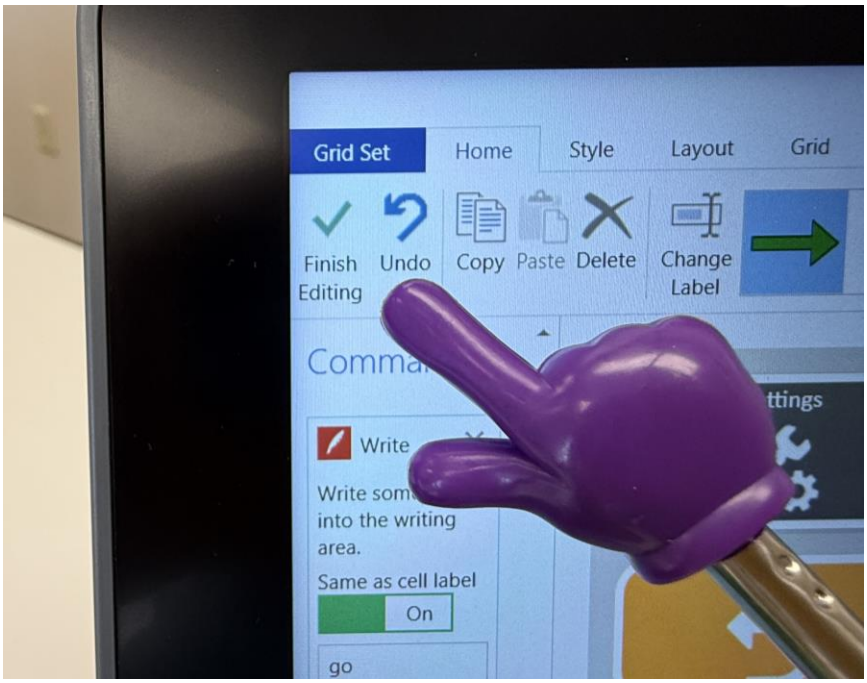

13. You can change the duration the signal should be sent. For many toys, 2-4 seconds may be sufficient.

14. There are many options for duration of signal transmission.

15. When finished, select **Finish Editing** in the upper left corner.

16. Now, when the button is activated, the toy should perform the programmed action.
